Project Works

Project 1 : Deploying a Multi-tier website using AWS EC2

Industry : Internet Related

Problem Statement : How to scale a website fast using AWS without the upfront cost

Topics : In this AWS project you will launch an EC2 instance without the need to invest in hardware up front, so you can develop and deploy applications faster. You can use Amazon EC2 to launch as many or as few virtual servers as you need, configure security and networking, and manage storage. Amazon EC2 enables you to scale up or down to handle changes in requirements or spikes in popularity, reducing your need to forecast traffic.

Highlights :

- ✓ Launch an EC2 Instance
- ✓ Enable Auto Scaling of EC2
- ✓ Create an RDS Instance
- ✓ Allow traffic from EC2 to RDS Instance

Project 2 : Website Orchestration**Industry :** Internet Related**Problem Statement :** How to orchestrate a website with lesser time and higher availability along with autoscaling.**Topics :** In this AWS project you will deploy a high-availability PHP application with an external Amazon RDS database to Elastic Beanstalk. Running a DB instance external to Elastic Beanstalk decouples the database from the lifecycle of your environment. This lets you connect to the same database from multiple environments, swap one database for another, or perform a blue/green deployment without affecting your database**Highlights :**

- ✓ Launch a DB instance in Amazon RDS
- ✓ Create an Elastic Beanstalk Environment
- ✓ Configure Security Groups and Scaling

Project 3 :- Publishing Amazon SNS messages privately**Industry –** Healthcare**Problem Statement :** How to secure patient records online and send it privately to the intended party**Topics :** In this project you will be working on a hospital project to send reports online and develop a platform so the patients can access the reports via mobile and push notifications. You will publish the report to an Amazon SNS which keeping it secure and private. Your message will be hosted on an EC2 instance within your Amazon VPC. By publishing the messages privately, you can improve the message delivery and receipt through Amazon SNS.**Highlights :**

- ✓ AWS CloudFormation to create a VPC
- ✓ Connect VPC with AWS SNS
- ✓ Publish message privately with SNS
